The purpose of the studies is to know how much the agribusiness companies which listing in stock exchange in Jakarta can improve their capability. We make measurement of the agribusiness companies with Economic Value Added (EVA) and relative price share performances. The object of study is sixth Agribusiness Company which listing as forestry, plantation and fishery companies in stock exchange. The period data of studies in two years base on their launch period in stock exchange. The results of the study were only one company took posted positive EVA just in one year and the others posted negative EVA. There were four companies have rise EVA between 2000 to 2001 and the others descent. Meanwhile the rise and decent of correlation between the relative price share performances just can be use only as reference with the others calculation.
