ABSTRACT

The Analysis of The Influence of Factors That Influenced The Performance of Agriculture Field Assistant in The Regency of Bulungan East Kalimantan

Muhammad Bansir

The objectives of this research were to identify and to analyze the influenced factors on the performance of the agriculture field assistant. This research was carried out by using survey technique with purposive sampling application. Criterion extension and linear regression were used to analyze the data. The significant factors influenced the agriculture field assistant were the wages, work status, and the ages. Moreover, the research result stated that wages and the work status significantly influenced the work performance by increasing the age of the agriculture field assistant. Regarding with this result the local government should pay attention to improve the incentives, operational support, clear job description for the agriculture field assistant through the participative policy.
