Abstract

The objectives of the research is to perceive whether the Aloe vera or papaya horticulture business is feasible to augment the farmers’ income. Using cost and benefit ratio, this research analyze 3 groups of land areas owned by the farmers: Ha ≤ 0.5, 0.5<Ha≤1.5 and Ha > 1.5.

The research finds out that Aloe vera horticulture business is feasible and beneficial to be implemented at all groups of land areas. However, it will be more beneficial to implement papaya horticulture at the land area of 0.5 < Ha ≤ 1.5. Since the scope of this study did not include the marketing aspect, it is recommended to conduct a further research in this area.
