ABSTRACT

Efficiency Level Analysis of BRI and BTN Operational Factors

Sigit Herlambang

This research investigates the efficiency level of BRI and BTN operational factors for the period 2005-2007 among fifteen Indonesian national banks with large asset. A non-parametric method of Data Envelopment Analysis (DEA) has been used to arrive at the efficiency scores.

The results indicate that, in the year 2005-2007 BRI is at efficient level. Thus, BTN is at the inefficient level. Further, our results suggest the need for changes in input and output variable in BTN in order to achieve the efficient level.

Since the study pinpoints the sources of inefficiency, it would also help BRI and BTN with strategic planning.
